OPEN PORTFOLIO

Enterprise Engineer Who Connects Technology with Business Outcomes

01

Enterprise Application and IT Development Lead with 2+ years of experience leading a 15-member IT team and delivering more than 10 business-critical systems for a manufacturing environment.

My work spans HRIS, production and QC reporting, KPI and OEE monitoring, SAP data integration and cloning, ERP, sales order management, finance and procurement reporting, payment integration, WhatsApp gateway, and workflow automation.

I combine hands-on full-stack development with solution architecture, stakeholder management, cloud infrastructure, team leadership, QA/UAT, deployment, and continuous improvement.

I build systems that make complex operational processes faster, traceable, scalable, and easier to manage.

15

IT team members led across concurrent enterprise initiatives

10+

Enterprise applications delivered for core business functions

10,000+

SAP transaction records synchronized per day

8h -> 1m

Production reporting turnaround transformed through automation

CORE VALUE PROPOSITION

Technical Leadership

Solution Architecture

SAP & API Integration

Data Synchronization

Performance Optimization

Enterprise Automation

Cloud Infrastructure

Stakeholder Management

Business-Critical Systems Delivered

02

WORKFORCE OPERATIONS

Integrated HRIS

E-leave, employee permissions, attendance, overtime, payroll, approval workflows, and centralized workforce reporting.

BUSINESS OPERATIONS

ERP Transaction Recording

Enterprise transaction recording, master data support, approvals, traceability, operational reporting, and cross-functional workflows.

MANUFACTURING INTELLIGENCE

Production Reporting & Performance

Automated production reports, Yield and OEE calculation, operational dashboards, and large-scale SAP-sourced data processing.

COMMERCIAL OPERATIONS

Sales Order Management

SO creation and monitoring, document workflows, customer and product data, approvals, and commercial process visibility.

QUALITY MANAGEMENT

QC Result Reporting & Certificate of Analysis

Quality result documentation, SAP material and production integration, CoA generation, and controlled information distribution.

FINANCE & PROCUREMENT

Financial and Purchase Reporting

Purchase reporting, finance monitoring, SAP data integration, transaction reconciliation, and management dashboards.

PERFORMANCE MANAGEMENT

Corporate KPI Platform

KPI monitoring, structured performance reporting, visibility across departments, and decision-support dashboards.

COMMUNICATION

WhatsApp Gateway & Notifications

Automated messages, operational alerts, scheduled communication, and integration with internal applications.

ENTERPRISE DATA

SAP Cloning & Integration Platform

REST APIs, scheduled synchronization, queue processing, batching, retries, checkpoints, and optimized local reporting datasets.

PAYMENTS & AUTOMATION

Payment Gateway and Workflow Automation

Payment integration, status monitoring, scheduled jobs, automated approvals, and reduced repetitive administrative work.

COVERAGE

HR, Production, QC, Purchasing, Finance, Sales, and operational support.

DELIVERY

Requirements, architecture, development, UAT, deployment, and maintenance.

INTEGRATION

SAP, REST API, webhooks, messaging gateways, payment services, and cloud infrastructure.

SAP Production Performance System

03

BUSINESS CHALLENGE

Production reporting was slow, fragmented, and dependent on manual processing.

- Production data needed to be consolidated from SAP and operational sources.
- Yield and OEE calculations required repeatable, consistent logic.
- Management needed faster visibility into production performance.
- High-volume datasets required efficient backend and database processing.

SOLUTION DELIVERED

Built an SAP-integrated monitoring and reporting platform for production KPIs.

- Automated SAP data synchronization through REST APIs and scheduled processes.
- Developed Yield, OEE, output, usage, and operational performance calculations.
- Created responsive dashboards for production and cross-functional users.
- Optimized queries, indexing, and backend processing for large datasets.

MY ROLE

Full-Stack Developer & Technical Owner

Requirement translation, architecture, backend engineering, SAP API integration, database optimization, dashboard development, deployment, and user support.

8 hours -> 1 minute

Production report preparation time after automation.

100 users

Internal users supported across multiple functions.

Up to 80%

Improvement in Yield and OEE calculation accuracy reported in the project.

TECHNOLOGY

Laravel PHP REST API SAP
MySQL Redis JavaScript AWS

BUSINESS OUTCOME

Faster reporting, more consistent KPI calculations, improved operational visibility, and a reusable data foundation for manufacturing analytics.

SAP Data Cloning & Integration Platform

04

BUSINESS CHALLENGE

Internal applications needed reliable access to high-volume SAP operational data.

- Direct reporting against SAP was not suitable for every operational use case.
- Large historical and real-time datasets required controlled synchronization.
- Failures, timeouts, and partial processing needed safe recovery mechanisms.
- Multiple internal systems required consistent, reusable enterprise data.

SOLUTION DELIVERED

Designed queue-based SAP integration and local data-cloning workflows.

- Developed REST-based synchronization for SAP tables and function modules.
- Used background jobs, batching, checkpoints, retries, and progress logging.
- Separated historical and real-time workloads to improve throughput.
- Applied Redis caching and SQL optimization for reporting performance.

SCALE

10,000+

SAP transaction records processed per day

ENGINEERING PATTERNS

- Asynchronous jobs and queues
- Batch and cursor processing
- Checkpoint and retry controls
- Historical vs. real-time workloads
- Progress and failure logging
- Database indexing and caching

TECHNOLOGY

Laravel Queue

SAP REST API

Redis

MySQL

PostgreSQL

Linux

AWS EC2

BUSINESS OUTCOME

A more reliable enterprise data layer that supports fast internal reporting, reduces repetitive SAP extraction work, and enables multiple applications to share consistent datasets.

Digitizing End-to-End Business Operations

05

HRIS & WORKFORCE OPERATIONS

Centralized employee services and approvals

- E-leave and employee permission workflows
- Attendance and overtime administration
- Payroll-support processes and reporting
- Role-based approvals and traceable status history
- Centralized employee and organizational information

ERP & TRANSACTION RECORDING

Structured operational data and process visibility

- Company transaction recording and master data
- Approval workflows and business documentation
- Operational monitoring and management reporting
- Cross-department process integration
- Data traceability and controlled user access

FINANCE, PROCUREMENT & SALES

Integrated commercial and financial workflows

- Sales order creation and monitoring
- Purchase and financial reporting
- SAP-sourced procurement and transaction data
- Payment gateway integration and status monitoring
- Dashboards for reconciliation and decision support

AUTOMATION & COMMUNICATION

Faster operational follow-up with fewer manual steps

- WhatsApp gateway for automated communication
- Real-time internal operational notifications
- Scheduled jobs and recurring business processes
- Cross-system integration through APIs and webhooks
- Automated alerts, reminders, and approval updates

PROCESS IMPACT

Reduced repetitive administration and manual data entry.

CONTROL IMPACT

Improved traceability, approval visibility, and data consistency.

MANAGEMENT IMPACT

Provided faster operational and management reporting.

How the Enterprise Systems Connect

A practical architecture pattern used to connect business users, internal applications, SAP services, data pipelines, and cloud infrastructure.

ARCHITECTURE PRINCIPLES

- API-first integration and reusable services
- Modular application design for maintainability
- Asynchronous processing for heavy workloads
- Controlled access and traceable business workflows
- Performance-focused database and caching strategy

PRODUCTION RELIABILITY

- Queue, retry, batching, and checkpoint mechanisms
- Deployment planning and post-release support
- SSL, domain, server, and cloud configuration
- Incident troubleshooting and root-cause analysis
- Technical documentation and coding standards

Current Stack and Growth Roadmap

07

Backend & Enterprise Integration

PHP, Laravel, REST API, Node.js, SAP integration, ABAP, webhooks, WhatsApp gateway, payment gateway integration, Rocket.Chat.

Frontend & Mobile

JavaScript, React, Next.js, React Native, Tailwind CSS, Bootstrap, responsive enterprise dashboards, user-centered operational interfaces.

Data & Performance

MySQL, PostgreSQL, Oracle, MongoDB, SQL optimization, indexing, Redis, data synchronization, ETL-style processing, reporting pipelines.

Cloud & DevOps

AWS EC2, RDS, ElastiCache, Linux administration, Apache, SSL, domain management, Git, GitLab, GitHub, deployment and troubleshooting.

Architecture & Delivery

Enterprise system design, API-first architecture, modular design, asynchronous jobs, caching, technical roadmaps, QA/UAT, release management.

Leadership & Collaboration

Team leadership, work allocation, code review, mentoring, requirement gathering, process mapping, project planning, stakeholder communication.

PROFESSIONAL DEVELOPMENT FOCUS

Modern enterprise engineering capabilities being strengthened

Presented as a learning roadmap rather than claimed production expertise.

TypeScript

Docker

CI/CD

Automated Testing

Kubernetes Fundamentals

Terraform

Observability

Event-Driven Architecture

AI / LLM Integration

From Business Need to Production System

08

My role extends beyond coding. I help organize people, decisions, risk, quality, and delivery throughout the application lifecycle.

01

Discover

Gather requirements, map processes, identify pain points, and clarify business outcomes.

02

Design

Define architecture, data flow, integration approach, security, and delivery priorities.

03

Build

Allocate work, develop features, review code, optimize performance, and document decisions.

04

Validate

Coordinate QA and UAT, resolve issues, manage release readiness, and prepare users.

05

Operate

Deploy, monitor, troubleshoot, maintain, and improve systems based on real usage.

LEADERSHIP SCOPE

15

Team members coordinated across architecture, development, quality, deployment, and operational support.

Mentoring

Code Review

Work Allocation

Standards

2024 - PRESENT

Foreman IT Programmer / IT Development Lead

PT Multi Spunindo Jaya Tbk - leading enterprise application development across manufacturing and corporate operations.

2023 - 2024

Full-Stack Developer

PT Weza Punya Cerita - web and mobile application development using Laravel and React Native.

2020 - 2024

Bachelor of Information Systems

Telkom University Surabaya - GPA 3.76/4.00, Cum Laude, completed in seven semesters.

RECOGNITION & LEADERSHIP

Registered Intellectual Property

NETRIS App - Registration No. EC002023101498.

Young Innovator Finalist

YouthConnect, BBPKK, 2024.

Organizational Leadership

Head of HR Division, project and competition leadership roles.

LET US BUILD MEASURABLE IMPACT

Ready to Lead and Deliver Enterprise Technology Solutions

Open to opportunities where I can contribute in technical leadership, enterprise application architecture, SAP integration, cloud engineering, and full-stack product delivery.
